

VPX Carrier Cards

VPX4812 / VPX4814 VPX Carrier Cards for XMC Modules

Air-cooled, conduction-cooled and REDI versions ◆ 3U Single XMC slot ◆ PCle x8 Gen 2 interface

Description

These 3U mezzanine carrier cards provide a simple and cost-effective solution for interfacing a XMC module to a VPX computer system. The carrier card routes power and bus signals to a plug-in mezzanine module through the VPX card slot connector. Industrial I/O and configurable FPGA modules from Acromag or other vendors are supported.

The VPX4812 can be used as a VPX switch card allowing a host CPU to communicate with up to 3 downstream cards in addition to the XMC card. Each VPX port can be configured to be x4 or x8.

The VPX4814 is a peripheral XMC carrier board designed to be used in a system that uses a VPX AcroExpress CPU.

These carriers are ideal for high-performance industrial, defense, scientific research, and telephony systems requiring high-speed I/O expansion. The VPX4812 and VPX4814 is available in three versions: air-cooled, conduction-cooled and a Ruggedized Enhanced Design Implementation (REDI VITA 48).
