TABLE OF CONTENTS

The information of this manual may change without notice. Acromag makes no warranty of any kind with regard to this material, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose. Further, Acromag assumes no responsibility for any errors that may appear in this manual and makes no commitment to update, or keep current, the information contained in this manual. No part of this manual may be copied or reproduced in any form without the prior written consent of Acromag, Inc.

IMPORTANT SAFETY CONSIDERATIONS

You must consider the possible negative effects of power, wiring, component, sensor, or software failure in the design of any type of control or monitoring system. This is very important where property loss or human life is involved. It is important that you perform satisfactory overall system design and it is agreed between you and Acromag, that this is your responsibility.

---	---

Trademarks are the property of their respective owners.

The APC-PMC is a PCI bus PMC module carrier designed for the 32-bit PCI bus. The carrier enables the use of PCI mezzanine I/O modules in a standard PCI computer system. The carrier card acts as an adapter to route PCI bus signals between the PCI bus of your PC and the J1 and J2 connectors of a PMC module card.

PMC modules with rear I/O are routed to rows A and C of a 64 pin DIN 41 612 signal connector on the APC-PMC card.

PMC modules with front I/O can be accessed through the PCI card face plate.

Upon receipt of this product, inspect the shipping carton for evidence of mishandling during transit. If the shipping carton is badly damaged or water stained, request that the carrier's agent be present when the carton is opened. If the carrier's agent is absent when the carton is opened and the contents of the carton are damaged, keep the carton and packing material for the agent's inspection.

For repairs to a product damaged in shipment, refer to the Acromag Service Policy to obtain return instructions. It is suggested that salvageable shipping cartons and packing material be saved for future use in the event the product must be shipped.

This board is physically protected with packing material and electrically protected with an anti-static bag during shipment. However, it is recommended that the board be visually inspected for evidence of mishandling prior to applying power.

Refer to the specifications for loading and power requirements. Be sure that the system power supplies are able to accommodate the power requirements of the system boards, plus the installed Acromag board, within the voltage tolerances specified.

Adequate air circulation must be provided to prevent a temperature rise above the maximum operating temperature and to prolong the life of the electronics. If the installation is in an industrial environment and the board is exposed to environmental air, careful consideration should be given to air-filtering.

Remove power from the system before installing board, cables, termination panels, and field wiring.

1.0 GENERAL INFORMATION

2.0 PREPARATION FOR USE

UNPACKING AND INSPECTION

WARNING: This board utilizes static sensitive components and should only be handled at a static-safe workstation.

CARD CAGE CONSIDERATIONS

IMPORTANT: Adequate air circulation must be provided to prevent a temperature rise above the maximum operating temperature.

Rear I/O Connector

The P2 rear connector provides 64 field I/O interface connections to the J4 connector of the PMC module. The P2 connector is a 64-pin DIN 41 612 male connector (Harting 09 09 164 6922 or equivalent) using rows A and C.

Table 2.1: Board Field I/O Pin Connections

P2 Row C Pin	J4 Pin	P2 Row A Pin	J4 Pin
1	1	1	2
2	3	2	4
3	5	3	6
4	7	4	8

31	61	31	62
32	63	32	64

Non-Isolation Considerations

The board is non-isolated, since there is electrical continuity between the PCI bus and PMC module grounds. As such, the field I/O connections are not isolated from the system. Care should be taken in designing installations without isolation to avoid noise pickup and ground loops caused by multiple ground connections.

Table 2.2 indicates the pin assignments of the PCI bus signals at the card edge (P1) connector. The connector pins are designated by a letter and a number. The letter indicates which side of the connector the pin contact is on. "B" is the component side of the board while "A" is the solder side. Connector "gold finger" numbers increase with distance from the bracket end of the printed circuit board. Table 2.2 also lists the P1 signals and to which PMC J1 or J2 pins they are routed. Five volt and 3.3 volt power and ground connections between the P1, J1, and J2 connector are routed on power and ground planes.

3.0 SERVICE AND REPAIR

SERVICE AND REPAIR ASSISTANCE

PRELIMINARY SERVICE PROCEDURE

CAUTION: POWER MUST BE TURNED OFF BEFORE REMOVING OR INSERTING BOARDS

WHERE TO GET HELP

www.acromag.com

Surface-Mounted Technology (SMT) boards are generally difficult to repair. It is highly recommended that a non-functioning board be returned to Acromag for repair. The board can be easily damaged unless special SMT repair and service tools are used. Further, Acromag has automated test equipment that thoroughly checks the performance of each board. When a board is first produced and when any repair is made, it is tested, placed in a burn-in room at elevated temperature, and retested before shipment.

Please refer to Acromag's Service Policy Bulletin or contact Acromag for complete details on how to obtain parts and repair.

Before beginning repair, be sure that all of the procedures in Section 2, Preparation For Use, have been followed. Also, refer to the documentation of your PMC module to verify that it is correctly configured. Replacement of the board with one that is known to work correctly is a good technique to isolate a faulty board.

If you continue to have problems, your next step should be to visit the Acromag worldwide web site at <http://www.acromag.com>. Our web site contains the most up-to-date product and software information.

An email question can also be submitted from the "Contact Us" tab.

Acromag's application engineers can also be contacted directly for technical assistance via telephone or FAX through the numbers listed at the bottom of this page. When needed, complete repair services are also available.

4.0 SPECIFICATIONS

Length	6.6 inches (167.64 mm)
Height	4.2 inches (106.68 mm)
Board Thickness	0.063 inches (1.6 mm)

PHYSICAL

- **P1 (PCI Bus)** PCI Specification 2.3 5V/3.3V board card edge finger spacing.
- **J1 and J2** PMC PCI bus connectors interface to P1 connector. J1 and J2 are Molex 71439-0164 or equivalent.
- **P2** Rear I/O connector with 64 pins of rows A and C interfaces to J4 of PMC module (DIN 41 612 Harting 09 03 164 6922 or equivalent).
- **J4** PMC Rear I/O interfaces to P2 connector (Molex 71439-0164 or equivalent).

Connectors

Operating Temperature: -40°C to +85°C

Relative Humidity: 5-95% Non-Condensing.

Storage Temperature: -55°C to 125°C.

ENVIRONMENTAL

Non-Isolated: PCI bus and field commons have a direct electrical connection.

PCI Local Bus Interface

PMC Compatibility: Pin assignment conform to PCI Bus Specification, Revision 2.3 and PMC Specification, P1386.1

Signaling: 5V or 3.3V as required by the PMC module.

PCI Bus Clock: This product is not guaranteed to function with a PCI bus clock frequency greater than 33MHz.

4502-032
